Product Specification Sheet

A.G.A. Aqua Bio

Regenerating and clarifying aquatic environments

AGA Aqua Bio is a micronised powder produced from the processing of high purity gypsum mineral ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$ - Calcium Sulphate Di-hydrate)

Typical applications

- Used in the treatment of ponds and rivers to reduce the level of silt and clarify the water. It rebalances the chemical composition of the water by the provision of calcium.

Product materials

- $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$ - Calcium Sulphate Di-hydrate

Product data

- The technical data outlined represents typical figures only. For further details please contact Formula directly

Purity Minimum	97.0%
pH	6-8
Particle size	
+300 microns	Maximum 0.2%
+150 microns	Maximum 2.5%
+75 microns	Maximum 25%

Material storage

- When stored under normal dry conditions, this product will not deteriorate chemically however; it is susceptible to compaction lumps.
- Each bag is stamped with a date of manufacture and a batch reference. Stocks should be rotated so that the oldest material is used first.

Supply details

- Unless otherwise stated, A.G.A. Aqua Bio are available in 25Kg paper or plastic sacks depending upon manufacturing location.
- Other pack options such as IBC (bulk bags) and bulk product in road tanker may also be available.
- The company contracts solely upon its conditions of sale, copies of which are available on request. Advice as to merchant outlets for industrial products may be obtained by contacting local sales offices.

For further technical information, health & safety issues or advice on any matter relating to an A.G.A. product, please contact A.G.A. Group directly.
